The regulated monitoring wells (Subtitle D) consist of the wells at the site that provide information on the quality of groundwater passing the relevant point of compliance and that are downgradient of combined Cells 5, 6, and 7, Cell 8 and Cell 9. **Table 1** summarizes the sampling locations used to monitor these cells. The on-site monitoring wells are designated as "TW". Wells designated as "MW" are off-site monitoring wells installed by the County to monitor off-site chemical concentrations in the groundwater. Wells designated as "RW" are also off-site monitoring wells and were converted from drinking water supply wells to monitoring wells by the County. Off-site residential water supply wells drilled into either the Zone 3 or Zone 4 aquifer are designated by the County parcel number with the prefix "P". Off-site residential water supply wells which have been drilled into the Zone 4 aquifer by the County have the suffix "Z4". Zone 4 residential wells are sampled biennially, with the exception of well P-417-Z4. This well is sampled annually as a conservative measure because there is no sentry monitoring point between the landfill and Parcel 417. **Table 2** lists the residential water supply wells. The residential water supply wells were not sampled during the Fall 2021 sampling event.

Regulated monitoring well (Subtitle D) TW-20 was abandoned on April 8, 2010, by a licensed well driller in accordance with COMAR 26.04.04.11. The well was placed to monitor groundwater downgradient of Cell 8 but was placed where a stormwater management pond was designated for Cell 9. Zone 3 monitoring well TW-20R was installed February 3-5, 2010, adjacent to Cell 8 as a replacement for abandoned monitoring well TW-20 per the approved EMP.

In addition to TW-20R, two non-regulated on-site Zone 4 monitoring wells were installed prior to the Spring 2010 sampling event. The installation of non-regulated on-site Zone 4 monitoring wells TW-14B and TW-6B were completed per the approved EMP on January 21, 2010 and February 2, 2010, respectively.

In accordance with the EMP, four on-site Zone 3 monitoring wells, TW-27, TW-28, TW-29, and TW-30, were installed prior to the Spring 2013 sampling event for incorporation into the regulatory monitoring well network for Cell 9. Additionally, existing monitoring wells TW-01, TW-02A, and TW-03, located south of Cell 9, are now considered part of the regulatory monitoring well network. Two years of background monitoring were completed prior to Cell 9 becoming operational in January 2017.

During the Fall 2020, construction activity for Cell 9 of the landfill involved significant earthwork in the immediate vicinity of TW-28, including raising the ground surface by 10-12 feet. As a result, new sections of well pipe were added to the top of TW-28 in order to vertically extend the well.

1.2 GROUNDWATER SAMPLING AND LABORATORY ANALYSIS

1.2.1 Groundwater Sampling

The County contracted with Environmental Monitoring and Assessment, LLC (EMA) of Lititz, Pennsylvania, to conduct the semi-annual groundwater sampling at the MLFRRF for the Fall 2021 sampling event. The sampling event included the collection of samples from 22 regulated on-site monitoring wells (Subtitle D), 15 regulated on-site monitoring wells (COMAR), 7 on-site non-regulated monitoring wells, and 12 off-site monitoring wells. The sampling locations are listed in **Table 1.**

Prior to collecting the groundwater samples, the depth to the water table was measured at each well. Once the water table measurement was recorded, the monitoring wells were purged and sampled in accordance with 40 CFR Part 258, MDE requirements, and the EMP. As the monitoring wells were purged, measurements of groundwater dissolved oxygen, pH, conductivity, temperature, oxidation-reduction potential, turbidity, and appearance were recorded.

1.2.2 Groundwater Sample Analysis

The groundwater analytical program for the MLFRRF includes the analysis of samples for parameters used to monitor both the existing and closed portion of the MLFRRF. For the purpose of uniformity and ease of implementation, the samples that are collected from the wells used to monitor the closed portion of the MLFRRF are analyzed in accordance with the detection monitoring requirements (defined by 40 CFR Part 258) for the existing portion of the MLFRRF, as specified in the EMP. In accordance with these detection monitoring requirements, the samples are analyzed for the parameters listed in Appendix I of 40 CFR Part 258 (Appendix I parameters). The Appendix I parameters include inorganic constituents (metals) and organic constituents (volatile organic compounds or VOCs).

In addition to these analytical requirements, the samples collected at the site are also analyzed for parameters historically monitored at the site. These parameters include dichlorodifluoromethane and dichlorofluoromethane, which are listed in Appendix II of 40 CFR Part 258 (Appendix II parameters), methyl tertiary butyl ether (MTBE), and general chemistry parameters such as chloride and total dissolved solids that can sometimes be indicators of landfill leachate (indicator parameters).

In accordance with this analytical program described above, the groundwater samples were analyzed for VOCs, total and dissolved metals, and general chemistry indicator parameters. The methods used to analyze the samples included USEPA Methods 8260 and 8011 for VOCs; USEPA Methods 6010D, 6020B, and 7470A for metals; and 40 CFR Part 136 methods for the indicator parameters. The full laboratory analytical results and data packages are presented as **Appendix E.**

1.3 SURFACE WATER SAMPLING AND LABORATORY ANALYSIS

1.3.1 Surface Water Sampling

During the Fall 2021 sampling event, three surface water samples, SW-1, SW-2, and SW-3 were collected by EMA from Wells Branch, which flows west to east across the site (see Figure C-1). The surface water samples were collected from the stream locations that are representative of upgradient and downgradient conditions. Sample location SW-1 is an upgradient location between Cell 8 and the leachate pretreatment plant, approximately 200 feet downgradient of monitoring well TW-10A. Sample location SW-2 is a downgradient location near the TW-4 well cluster. Surface water collected at this location is representative of surface water conditions prior to discharging off-site. Sample location SW-3 is a mid-stream location that is downgradient of Stormwater Pond 8-1 and is located between combined Cells 5-7, Cell 8, and Cell 9. This location is approximately equal distance from sample locations SW-1 and SW-2.

1.3.2 Surface Water Sample Analysis

The surface water samples were analyzed for VOCs, total metals, and indicator parameters. The methods used to analyze the samples included USEPA Method 8260 and 8011 for VOCs; USEPA Methods 6010D, 6020B, and 7470A for metals; and 40 CFR Part 136 methods for the indicator parameters.

1.4 QUALITY ASSURANCE/QUALITY CONTROL SAMPLING AND ANALYSIS

1.4.1 Quality Assurance/Quality Control Sampling (QA/QC)

Field and laboratory QA/QC protocols were employed during the sampling event to ensure that QA/QC criteria were met. The field QA/QC protocols included the collection and analysis of two blind duplicate samples from wells TW-24 and TW-30. In addition, one field blank and four trip blanks were prepared and analyzed. The laboratory QA/QC protocols included the analysis of method blanks and matrix spike (MS) and matrix spike duplicate (MSD) samples for GC/MS runs. These protocols help identify possible sources of VOC contamination that may cause elevated or false positive parameter levels to be reported.

1.4.2 Quality Assurance/Quality Control Sample Analysis

To ensure that the field QC criteria were met, blind duplicate samples were analyzed for all parameters for which the groundwater samples were analyzed. These parameters include VOCs by USEPA Method 8260 and 8011; total and dissolved metals by USEPA Methods 6010D, 6020B, and 7470A; and the indicator parameters by 40 CFR Part 136 methods. The field blank was also analyzed for all parameters for which the Subtitle D regulated monitoring wells were analyzed. These parameters include VOCs by USEPA Method 8260 and 8011; total and dissolved metals by USEPA Methods 6010D, 6020B, and 7470A; and indicator parameters by 40 CFR Part 136 methods. The trip blanks were analyzed for VOCs according to USEPA Method 8260 and 8011.

To ensure that the laboratory QA criteria were met, project-specific MS and MSD samples were analyzed at the rate of one MS/MSD sample for every 20 field samples, as specified in the EMP. The MS and MSD samples were used by the laboratory to evaluate possible matrix effects that could have interfered with the analytical method, and to estimate the method precision. The analysis of laboratory method blanks was performed to identify possible sources of contamination that may have caused elevated or false positive parameter levels to be reported.

1.5 DATA ANALYSIS METHODOLOGY

The analysis of the data obtained during this sampling event included: validation of the laboratory data, determination of USEPA National Primary Drinking Water Standards (MCLs) exceedances,

statistical evaluation of upgradient versus downgradient parameter concentrations, identification of GWPS exceedances, and assessment of groundwater elevations.

The laboratory sample data and QA/QC data were validated to verify proper analytical procedures and checks were performed by the analytical laboratory. The laboratory data validation is discussed further in **Appendix D** of this report. The laboratory analytical data packages are presented as **Appendix E** of this report.

The data were evaluated to determine whether or not concentrations exceeded MCLs and National Secondary Drinking Water Standards (SMCLs), state health-based standards, and site-specific GWPS. The GWPS for the site were established in 1997. This evaluation is included in **Section 3** of this report.

The data analysis included a statistical evaluation of the detection monitoring data obtained from the on-site regulated monitoring wells (Subtitle D). This evaluation was used to determine if there is a statistically significant change in groundwater quality for the portions of the site subject to 40 CFR Part 258.54 that may be attributed to the MLFRRF. The historical concentrations of the parameters detected in the groundwater samples from each on-site regulated monitoring well (Subtitle D) were compared to the historical background data using statistical methods described in the EMP and 40 CFR Part 258.53(g). The statistical analysis is discussed further in **Section 4** of this report.

2 SUMMARY OF SAMPLING EVENT

2.1 OVERVIEW

The County contracted with EMA to conduct the Fall 2021 sampling event at the MLFRRF. VOC sample analysis was performed by Maryland Spectral Services of Baltimore, Maryland, and inorganic sample analysis was performed by Pace Analytical Service (Pace), of Greensburg, Pennsylvania and Beaver, West Virginia.

The groundwater monitoring wells were purged and sampled in accordance with the EMP and 40 CFR Part 258. **Figure C-1** shows the locations of the sampling points and the corresponding sampling classifications. Quality control blanks and blind duplicates were obtained, as discussed in **Section 1.4.1** of this report. The groundwater samples were submitted to the laboratory for analyses of total and specific dissolved metals, Appendix I VOCs, and inorganic indicators of leachate (chloride, ammonia, nitrite and nitrate-nitrogen, chemical oxygen demand, total alkalinity, sulfate, dissolved solids, and hardness).

2.2 DATA ANALYSIS

The methods used to collect and analyze the groundwater, surface water and QA/QC samples for this sampling event were evaluated to determine compliance with the EMP for the site and 40 CFR Part 258. The following procedures were followed to evaluate the compliance of the field sampling activities and the laboratory methods:

- Review of the appropriateness of the analytical methods;
- Review of the appropriateness of sample bottle types, preservatives, and holding times for each analytical method;
- Review of reports and analytical data for trip blanks, field blanks, duplicate samples, and laboratory method blanks to identify possible evidence of contamination;
- Review of Chain-of-Custody documentation for accuracy and completeness; and
- Review of field methods described in the field sampling reports.

The field and laboratory results were also evaluated to determine the validity of the data. The following procedures were followed to assess the validity of the data:

- Calculation of charge balance errors on the samples collected in the field;

- Review of MS and MSD samples to evaluate possible matrix effects that may interfere with the analytical method;
- Review of MS, MSD, and blind duplicate samples to calculate the relative percent difference (RPD) of duplicate samples in obtaining an estimate of laboratory method precision;
- Review of laboratory reports on instrument tuning, instrument calibration, and recoveries of spiked samples for each analytical method; and
- Comparison of the analytical data and groundwater elevations to historical values at each sampling location.

The results obtained from this evaluation satisfy the project QA/QC objectives. The results of the evaluation of the analytical data are provided in **Appendix D.** The full laboratory analytical data packages are presented as **Appendix E** of this report.

A comparison of the analytical data to MCLs, SMCLs, State standards, and established GWPS, as well as to historical data, is discussed in **Section 3.**

3 SUMMARY OF ANALYTICAL RESULTS

3.1 INTRODUCTION

Groundwater elevations were measured by the County on a monthly basis and are included in this report in **Appendix C**. The field and laboratory analytical results were evaluated by comparing the current data to historical data. The laboratory results were also evaluated for compliance with regulatory standards. In assessing the laboratory data, each parameter was evaluated for compliance with: (i) MCLs and SMCLs; (ii) Maryland health-based standards; and (iii) GWPS established for the site. MCLs and GWPS are established based on health concerns, whereas SMCLs are based on aesthetic concerns, such as taste, color, and odor. A statistical evaluation of the laboratory results is presented in **Section 4**.

3.2 GROUNDWATER ELEVATION DATA

The monthly water table measurements recorded during October 2021 are provided in **Appendix C.** The groundwater elevations are generally consistent with historical data.

Potentiometric surface contours for groundwater levels measured in wells screened within the Zone 3 aquifer during Fall 2021 are illustrated on **Figure C-1** in **Appendix C**. As shown on the drawing, the general direction of groundwater flow in the Zone 3 aquifer at the MLFRRF is toward the northeast. Groundwater flow direction is consistent with historical data.

3.3 ANALYTICAL RESULTS

The results of the comparison of the analytical data to regulatory standards and to historical trends are discussed below for the volatile organic and inorganic data. In assessing the data, each parameter was evaluated for compliance with the MCLs and SMCLs, with Maryland health-based standards, and with GWPS established for the site.

The current analytical data and the historical analytical data are included in tables in **Appendix A.** The tables present the concentrations over time for organic and inorganic parameters. They provide a simple means of evaluating trends in the concentrations. The "J" qualifier associated with a concentration indicates the compound was detected at a trace concentration below the laboratory RL but above the MDL and as such is an estimated value. The "U" qualifier associated with a concentration indicates the compound was not detected. The "B" qualifier indicates possible laboratory contamination due to the compound being detected in the method or field blank sample analysis.

3.3.1 **MCL Exceedances**

Table 3 lists the MCL exceedances at the site for this sampling event. As shown in **Table 3**, there were two parameters that exceeded their applicable MCLs. Time-series plots for parameter concentrations with historic MCL exceedances for on-site monitoring wells have been constructed to identify potential trends in concentrations over time. These plots are included in **Appendix B**.

One of the MCL exceedances was consistent with the historical record. There was one first-time MCL exceedance during the Fall 2021 sampling event. The concentration of nitrate, 21.7 J mg/L, in Subtitle D well TW-02A exceeded the applicable MCL of 10 mg/L. The MDE was notified of the exceedance. However, the laboratory subsequently admitted that there was an error during the analysis and therefore the result was invalid. As a conservative measure, a confirmation sample was collected from TW-02A on December 9th, 2021 and analyzed for nitrate. The concentration of nitrate in the confirmation sample was measured to be below the applicable MCL.

3.3.2 **On-site Regulated Monitoring Wells (Subtitle D)**

Appendix I Volatile Organic Compounds

As shown on **Table 4,** eight different VOCs were detected above the RL across 13 different monitoring locations. The concentration of methylene chloride in TW-25A exceeded its applicable MCL, as it has done over the past several years.

All detections of VOCs above the RL were generally consistent with the historical record. No Appendix I VOCs were detected above the RL in the following Subtitle D wells during the Fall 2021 sampling event: TW-02A, TW-03, TW-04B, TW-10A, TW-20R, TW-23, TW-24A, TW-27, and TW-30.

Appendix II Volatile Organic Compounds and MTBE

As shown in **Table 5**, detections above the RL of dichlorodifluoromethane, dichlorofluoromethane, and MTBE were noted for 11 different locations. There were no GWPS or Maryland State Action Level exceedances. In general, concentrations of these parameters are consistent with concentrations measured over the past 10 years.

No Appendix II VOCs were detected above the reporting limit in the following Subtitle D wells during the Fall 2021 sampling event: TW-02A, TW-03, TW-04B, TW-05A, TW-10A, TW-14A, TW-20R, TW-23, TW-24A, TW-27, and TW-30.

Inorganics

As previously mentioned, there was an MCL exceedance in TW-02A for nitrate. However, the laboratory subsequently admitted that there was an error during the analysis and therefore the result was invalid. The concentration of nitrate in the confirmation sample was measured below the applicable MCL.

Mercury was detected at concentrations above the RL only in Subtitle D wells TW-04B, TW-06, TW-24, TW-24A, and TW-25A. Concentrations in all five of these wells were below the applicable MCL.

Iron (total and dissolved), manganese (total and dissolved), and turbidity were detected in many of the regulated monitoring wells (Subtitle D) at concentrations that exceeded the applicable SMCLs. Iron and manganese are typical naturally occurring metals found in groundwater and are not necessarily indicative of contamination from the landfill. Measurements of pH were below the SMCL range for most on-site Subtitle D regulated monitoring wells. Low pH is also typical of groundwater and is believed to be a natural property of groundwater at the MLFRRF. Furthermore, pH concentrations in the downgradient monitoring wells are consistent with those measured in upgradient background groundwater.

Concentrations of inorganic parameters measured during the Fall 2021 sampling event—including those of iron, manganese, and pH—are generally consistent with the historical record.

3.3.3 **On-site Regulated Monitoring Wells (COMAR)**

Appendix I Volatile Organic Compounds

As shown on **Table 6,** there were no Appendix I VOCs detected above the RL across all COMAR regulated on-site monitoring wells. As such, there were no MCL or GWPS exceedances.

Appendix II Volatile Organic Compounds and MTBE

As shown in **Table 7**, there was only one detection above the RL in a COMAR regulated on-site monitoring well. There were no GWPS or Maryland State Action Level exceedances. The concentration was consistent with the historical record. There were no Appendix II VOCs detected above the RL in COMAR regulated wells TW-07, TW-07A, TW-08, TW-08A, TW-09B, TW-09C, TW-15, TW-16, TW-17, TW-17A, TW-21, TW-22, TW-22A, and TW-22B.

Inorganics

Mercury was detected at a concentration above the RL in two COMAR regulated wells (TW-15B and TW-22A). The concentrations were below the applicable MCL. Iron (total and dissolved), manganese (total and dissolved), and turbidity were detected in several of the COMAR regulated

monitoring wells at concentrations that exceeded their applicable SMCLs. Iron and manganese are typical naturally occurring metals found in groundwater and are not necessarily indicative of contamination from the landfill. Measurements of pH were below the SMCL range for all on-site COMAR regulated monitoring wells. Low pH is also typical of groundwater and is believed to be a natural property of groundwater at the MLFRRF. Furthermore, pH concentrations measured in the downgradient wells are comparable to upgradient background concentrations.

Concentrations of inorganic parameters measured in COMAR regulated monitoring wells during the Fall 2021 sampling event—including those of iron, manganese, and pH—were consistent with the historical record.

3.3.4 **On-site Non-regulated Monitoring Wells**

Volatile Organic Compounds

As shown on **Table 8**, there was one Appendix I VOCs detected above the RL in one on-site non-regulated monitoring well during the Fall 2021 sampling event. This detection is consistent with the historical record. There were no Appendix I VOCs detected above the RL in the following on-site non-regulated wells: TW-02, TW-03A, TW-06A, TW-06B, TW-09, TW-14B, and TW-16A.

Appendix II VOCs detected above the RL are typically shown on **Table 9** but there were no detections above the RL in on-site non-regulated monitoring wells during the Fall 2021 sampling event.

Inorganics

Mercury was not detected above the RL in any on-site non-regulated monitoring wells. Iron (total and dissolved), manganese (total and dissolved), and turbidity were detected in a few of the on-site non-regulated monitoring wells at concentrations that exceeded their applicable SMCLs. Iron and manganese are typical naturally-occurring metals found in groundwater and are not necessarily indicative of contamination from the landfill. Measurements of pH were below the SMCL range for most on-site non-regulated monitoring wells. Low pH is also typical of groundwater and is believed to be a natural property of groundwater at the MLFRRF. Furthermore, pH concentrations measured in the downgradient wells are comparable to upgradient background concentrations.

Concentrations of inorganic parameters measured in on-site non-regulated monitoring wells during the Fall 2021 sampling event—including those of iron, manganese, and pH—are generally consistent with the historical record.

3.3.5 **Off-site Non-regulated Monitoring Wells**

Appendix I Volatile Organic Compounds

As shown on **Table 10,** six different Appendix I VOCs were detected above the RL across ten different off-site non-regulated monitoring well locations. There were no MCL or GWPS exceedances. In general, VOC concentrations detected above the RL in these wells are consistent with historical concentrations.

Appendix II Volatile Organic Compounds and MTBE

As shown in **Table 11**, detections of dichlorodifluoromethane and dichlorofluoromethane above the RL were observed at nine off-site non-regulated monitoring wells. There were no detections of MTBE above the RL. There were no GWPS or Maryland State Action Level exceedances. The detected concentrations of dichlorodifluoromethane and dichlorofluoromethane are generally consistent with the historical record. There were no Appendix II VOCs detected above the RL in well MW-P4, MW-P440, and RW-P171-1.

Inorganics

All off-site non-regulated monitoring wells were analyzed for mercury. There were no concentrations detected above the RL during the Fall 2021 sampling event.

3.3.6 **Off-site Residential Zone 4 Water Supply Wells**

As shown on **Table 12** and **Table 13**, there were no off-site residential Zone 4 water supply wells sampled during the Fall 2021 event.

3.3.7 **Surface Water Sampling Locations**

Appendix I and Appendix II Volatile Organic Compounds

As shown on **Table 14** and **Table 15**, there were no Appendix I or Appendix II VOCs detected above the RL at any surface water monitoring locations during the Fall 2021 sampling event.

Inorganics

There were no MCL exceedances of inorganic parameters at the surface water sampling locations. SMCL exceedances were observed for iron at SW-2 and SW-3, manganese at SW-3, while turbidity exceeded its SMCL at all three locations. Concentrations of all detected inorganic parameters at surface water locations were consistent with historical values.

4 STATISTICAL EVALUATION

4.1 INTRODUCTION

In accordance with the EMP and 40 CFR Part 258.53, groundwater sampling and analysis requirements, the groundwater parameters at the MLFRRF have been statistically analyzed. Listed below are the objective of the analysis, the procedures used, and the summary of results. The detailed results of the statistical analysis are included after the text.

4.2 OBJECTIVE

According to the Code of Federal Regulations (40 CFR Part 258), groundwater monitoring data must be statistically analyzed to determine if parameter levels are exceeding background groundwater quality levels at each downgradient well. This goal is met by statistically analyzing the groundwater data that have been collected on the site since 1993. The analyses will determine if the land use may be contributing to groundwater contamination.

4.3 PROCEDURE

Samples have been collected since 1993 and tested for the constituents specified in the EMP. The concentrations observed in the downgradient wells are compared to the concentrations observed in the upgradient wells. If the downgradient samples show significantly higher concentrations than the upgradient samples statistically, it indicates that land use practices are likely affecting the groundwater quality.

The groundwater data were analyzed using the Mann-Whitney Test (Wilcoxon Rank Sum Test) to determine whether the downgradient data differed from the upgradient data with statistical significance. The Mann-Whitney analysis is nonparametric, that is, it assumes no underlying distribution (like the normal distribution) and compares two groups of data and determines whether both groups come from the same population with a certain confidence.

Individual statistical tests have a certain amount of uncertainty associated with them. When multiple tests are combined (from different wells and different constituents), that uncertainty is compounded. An overall network-wide Type I error rate of 5% is required by 40 CFR Part 258.53(h)(2); however, an error rate no less than 1% shall be applied to any single test. A 5% Type I error rate means 5% of the recognized exceedances are in reality not actually elevated above background levels; that is, they represent false positives.

Statistical analyses are performed for all parameters detected over the RL during the Fall 2021 sampling event at downgradient wells. Using the Bonferroni adjustment to account for multiple

statistical comparisons, a Type I error rate of much less than 1% per analysis would result, so a Type I error rate of 1% was used as the minimum allowable under 40 CFR Part 258.52(h)(2).

For each sampling event, an average concentration from the upgradient wells was calculated. The collection of average concentrations for all sampling events was then compared to the concentrations for all sampling events at each of the downgradient wells. For each downgradient well, the upgradient and downgradient concentrations are combined and ranked (the lowest concentration is assigned a rank of 1). Tied concentrations are ranked equally by averaging the ranks that would be assigned to the tied group if they were not tied.

The sum of the ranks, the number of upgradient observations, and the number of downgradient observations are used to calculate the Mann-Whitney Test Statistic (U). The calculated U for each well/parameter pair is compared to a critical U value which is published in tables in statistical texts. Critical U values are based on the number of samples in the upgradient group and at each downgradient well. Therefore, the critical U values vary from parameter-to-parameter and from well-to-well. If the calculated U is greater than the critical U, there is no exceedance at 99% confidence (a 1% Type I error rate for each analysis). Likewise, if the calculated U is less than the critical U, there is an exceedance.

Because the upgradient (background) condition is compared to each downgradient well separately, each well/parameter combination is tested. The results of all of the tests are included following the report text. There may be exceedances in some downgradient wells for a particular parameter, but not in other downgradient wells.

4.4 SUMMARY OF RESULTS

The results of the statistical analysis are shown on **Table 16.** The findings indicated that downgradient samples show constituent concentrations that are statistically significant increases (SSIs) above background levels in all 20 of the downgradient on-site regulated wells. While there were a few new SSIs identified during the Fall 2021 sampling event for which concentrations are below the RL, these are not of major concern because the parameters were detected at trace levels.

There were five new SSIs identified for which parameters were detected above the RL during this sampling event that were not identified during the previous sampling event. These new SSIs consist of trichlorofluoromethane in TW-25A and TW-28, beryllium in TW-25A, vanadium in TW-20R, and total dissolved solids in TW-24A. The SSIs for trichlorofluoromethane in TW-25A and TW-28, beryllium in TW-25A, vanadium in TW-20R were not identified during the previous sampling event because statistical tests were not run for these parameters, as they were not detected above the RL in any Subtitle D wells during the Spring 2021 sampling event. However, these parameters are typically detected at low level concentrations in their respective wells and none of

them exhibited significant increases during the Fall 2021 event. As such, these new SSIs are not of major concern.

Although a new SSI was identified for total dissolved solids in TW-24A, the concentration detected during the Fall 2021 event was less than the concentration detected during the Spring 2021 event. Furthermore, the concentration measured in TW-24A was less than that of background well TW-10A.

The statistical exceedances are generally consistent with historical exceedances. Concentrations of most parameters that exhibited SSIs have generally been consistent with their historical data set; that is, no trend is apparent in the concentrations.

5 RECOMMENDATIONS

The results of the Fall 2021 groundwater sampling event indicate that overall, groundwater conditions are generally consistent with historical data for the MLFRRF. Many monitoring wells continue to show VOC concentrations lower than historical data. While the data and statistical evaluations indicate that a release of landfill constituents to groundwater may have occurred, the site-specific hydrogeology and the corrective measures already implemented by the County have limited the potential for any adverse effects on human health and the environment. It is recommended that regular groundwater monitoring be continued in accordance with the EMP.

An X indicates an SSI over background. A ‡ indicates an SSI was identified during this event, but the parameter was not detected during this event. An asterisk (*) indicates an SSI was identified during this event, but the parameter was detected below the reporting limit or was flagged with a B qualifier during this event. A bold character indicates an SSI that was not identified during the previous event.

APPENDIX D
Data Validation

APPENDIX D
LABORATORY DATA VALIDATION

1.1 INTRODUCTION

This document presents the summary of data validation performed on the laboratory analytical data associated with the 2nd semi-annual 2021 groundwater monitoring event at the Millersville Landfill and Resource Recovery Facility (MLFRRF) in Anne Arundel County, Maryland. Groundwater samples were collected pursuant to the Annotated Code of Maryland (COMAR) Title 26, Chapter 4; the Code of Federal Regulations (CFR) Title 40, Chapter Part 258; and the MLFRRF Environmental Monitoring Plan (EMP).

Groundwater and surface water sampling for the 2nd semi-annual 2021 event was performed on October 4-7, October 12-14, and October 20-21, 2021. Environmental Monitoring and Assessment (EMA), LLC of Lititz, Pennsylvania conducted the sampling. Laboratory analysis for volatile organic compounds (VOCs) was performed by Maryland Spectral Services (MSS) of Baltimore, Maryland and for laboratory analysis for inorganic compounds was performed by Pace Analytical Service (Pace) of Greensburg, Pennsylvania.

Quality Assurance/Quality Control (QA/QC) protocols employed during this event included the analysis of matrix spike (MS) and matrix spike duplicate (MSD) samples, laboratory control samples (LCS), laboratory method blanks, and laboratory preparation blanks. These protocols also included the analysis of two blind duplicate samples obtained from TW-24 (DUP-1) and TW-30 (DUP-2). In addition, the QA/QC protocols included the preparation of four trip blanks and one field blank.

Samples were analyzed for VOCs, total and dissolved metals, and general chemistry parameters.

1.2 SAMPLE PACKAGE COMPLETENESS AND DELIVERABLES

Chains of custody were present in the data packages for all samples, along with statements from the laboratory attesting to the validity of the data. All requested analyses were accounted for in the data report. Sample receipt forms were present for all samples.

1.3 VOLATILE ORGANIC COMPOUND ANALYSES

1.3.1 General Information

<u>Groundwater Sampling Locations (56):</u>

TW-01, TW-02, TW-02A, TW-03, TW-03A, TW-04, TW-04B, TW-05, TW-05A, TW-05B, TW-06, TW-06B, TW-07, TW-07A, TW-08, TW-08A, TW-09, TW-09B, TW-09C, TW-10A, TW-14, TW-14A, TW-14B, TW-15, TW-15B, TW-16, TW-16A, TW-17, TW-17A, TW-19,

TW-20R, TW-21, TW-22, TW-22A, TW-22B, TW-23R, TW-24, TW-24A, TW-25, TW-25A, TW-27, TW-28, TW-29, TW-30, MW-P4, MW-P9, MW-P106, MW-P417, MW-P440, RW-P109, RW-P165, RW-P171-1, RW-P264, RW-P440, RW-P441, and RW-P584.

Surface Water Sampling Locations (3):

SW-1, SW-2, and SW-3.

QA/QC Samples:

Field blank, all trip blanks, laboratory control samples, laboratory method blanks, and laboratory MS/MSDs.

1.3.2 **Analytical Method**

The samples were analyzed for VOCs following the United States Environmental Protection Agency (USEPA) Methods 8260B and 8011. The target analyte list was that established as Appendix I by 40 CFR Part 258, "Constituents for Detection Monitoring" and Appendix II (40 CFR Part 258) parameters – dichlorodifluoromethane and dichlorofluoromethane, and methyl tertiary-butyl ether (MTBE).

Field and Trip Blanks

One field blank and four trip blanks were prepared and analyzed for this sampling event. There were no parameters detected in any of the four trip blanks. Chloroform was detected in the field blank in work order 3044673; however, chloroform was not detected in any samples on the same day, so no concentrations were flagged with "B" qualifiers.

Blind Duplicate Samples

The blind duplicate samples were collected from wells TW-24 (DUP-1) and TW-30 (DUP-2). Analyses were performed to calculate the RPD of duplicate samples in obtaining an estimate of laboratory method precision. Table D-1 summarizes the RPD of constituents detected above the RL. The agreement between the detected VOCs in the duplicate and corresponding sample was within QC standards.

Quality Control Sample Review

Quality Control samples for each laboratory report were reviewed to verify proper documentation of any analysis issues. Notable observations from the quality control samples are summarized below.

- Surrogates: For all projects, all surrogates were within quality control limits.
- Method Blanks: For all projects, there were no analytes detected in method blanks.

- Laboratory Control Spike: For all projects, recoveries in the laboratory control samples were within quality control limits, with a few exceptions. For the following projects, recoveries in the laboratory control samples were outside quality control limits:1100618. No additional qualification was necessary.
- Matrix Spikes: For all projects, recoveries in matrix spikes and matrix spike duplicates were within quality control limits, with a few exceptions. The following projects had matrix spike or matrix spike duplicate recoveries that were outside control limits: 1100618, 1100727, 1101426, and 1102137. No additional qualification was necessary.
- Laboratory Duplicate: For all projects, the precision between the sample and laboratory sample duplicate was within control limits. No additional qualification was necessary.

1.4 INORGANIC ANALYSIS

1.4.1 General Information

Groundwater Sampling Locations (56):

TW-01, TW-02, TW-02A, TW-03, TW-03A, TW-04, TW-04B, TW-05, TW-05A, TW-05B, TW-06, TW-06B, TW-07, TW-07A, TW-08, TW-08A, TW-09, TW-09B, TW-09C, TW-10A, TW-14, TW-14A, TW-14B, TW-15, TW-15B, TW-16, TW-16A, TW-17, TW-17A, TW-19, TW-20R, TW-21, TW-22, TW-22A, TW-22B, TW-23R, TW-24, TW-24A, TW-25, TW-25A, TW-27, TW-28, TW-29, TW-30, MW-P106, MW-P4, MW-P417, MW-P440, MW-P9, RW-P109, RW-P165, RW-P171-1, RW-P264, RW-P440, RW-P441, and RW-P584.

Surface Water Sampling Locations (3):

SW-1, SW-2, and SW-3.

QA/QC Samples:

Field Blank, laboratory control samples, laboratory method blanks, laboratory duplicates, and laboratory MS/MSDs.

1.4.2 Analytical Methods

On-site samples were analyzed for antimony, arsenic, barium, beryllium, cadmium, calcium (total and dissolved), chromium, cobalt, copper, iron (total and dissolved), lead, magnesium (total and dissolved), manganese (total and dissolved), mercury, nickel, potassium (total and dissolved), selenium, silver, sodium (total and dissolved), thallium, vanadium, and zinc using the Inductively Coupled Plasma Optical Emission Spectrometry/Mass Spectrometer (ICP/MS) (USEPA Method 6010D and 6020B). Mercury was analyzed using the Cold Vapor Atomic Absorption Spectrometry method (CVAA) (USEPA Method 7470A).

Additionally, samples were analyzed for chloride (Standard Method [SM]4500CIE), nitrate and nitrite (SM4500NO3-F and SM4500NO2-B), ammonia (USEPA Method 350.1), chemical oxygen demand (USEPA Method 410.4), hardness (SM2340B), alkalinity (SM2320B), sulfate (USEPA Method 9038), total dissolved solids (SM2540C), and turbidity (SM2130B).

Off-site samples (MW and RW) were analyzed for mercury (total) only. All QC data were compared with quality control criteria for drinking water analysis in the USEPA Analytical Procedures for Determination of Metals under 40 CFR Part 136.

Field Blank

One field blank was prepared and analyzed for this sampling event as part of work order 30446733. There were "J" qualified" detections for chemical oxygen demand and chloride in the field blank; however, no concentrations of these parameters were detected in samples on the same day, so no parameters were flagged with "B" qualifiers.

Blind Duplicate Samples

Table D1 summarizes the RPD of the detected inorganic constituents in duplicate samples. RPD's were generally within control limits. The highest RPD was 111.1% for concentrations of alkalinity in TW-24 and DUP-1. There was one other parameter with a RPD over 20%: total dissolved solids at 24% for TW-30 and DUP-2. The RPD for most analytes was less than 10%.

Charge-Balance Error

The charge-balance error of samples collected in the field can be used to evaluate whether all ionic species that exist in the groundwater sample have been identified. Table D2 provides a summary of the calculated charge-balance errors. Thirteen out of 47 samples had a charge-balance error greater than the 20%. Charge-balance errors greater than 20% may indicate that ions are present in the groundwater sample that were not used in the calculations.

Project Narrative Review

Project narratives for each data package were reviewed to verify proper documentation of any analysis issues. Notable observations from the project narratives are summarized below.

- Holding Time: All samples in all projects were analyzed within the method required holding times, except for a few analyses using method SM4500NO2B in projects 30444380 and 30443913, and 7470A in project 30446733.
- Initial Calibration: For all projects, all criteria were within method requirements.
- Continuing Calibration: For all projects, all criteria were within method requirements.
- Internal Standards: For all projects, all internal standards were within quality control limits.

- Method Blanks: The following projects had at least one analyte detected above the reporting limit in the associated method blank: 30444380, 30444398, 30445538, 30443913, and 30445311. The results were flagged with a "B" qualifier if an analyte was detected above the reporting limit in a method blank.
- Laboratory Control Spike: All laboratory control spike compounds were within quality control limits.
- Matrix Spikes: For the following projects, at least one analyte in a matrix spike or matrix spike duplicate was recovered outside the quality control limits: 30444380, 30444398, 30445538, 30443913, 30445311, 30446733, and 30458348. The associated batch was either accepted based on LCS recovery or proper qualification was added for the associated sample results.
- Laboratory Duplicate: For all projects, the precision between the sample and laboratory sample duplicate was within control limits.
- Dilutions: For all projects, no samples required dilution.
- Volume reduction: For the following projects, at least one sample was reduced in volume to be within an acceptable range: 30444398. Proper qualification was added by the laboratory for the associated sample results.

Notes and Definitions

J	Detected but below the reporting limit; therefore, result is an estimated concentration (CLP J-Flag).
RE	Sample reanalyses are done at the laboratory's discretion as a mechanism to improve data quality. Any client requested reanalysis will be identified with a sample qualifier.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
%-Solids	Percent Solids is a supportive test and as such does not require accredidation

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the reporting limit; therefore, result is an estimated concentration (CLP J-Flag).
RE	Sample reanalyses are done at the laboratory's discretion as a mechanism to improve data quality. Any client requested reanalysis will be identified with a sample qualifier.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
%-Solids	Percent Solids is a supportive test and as such does not require accredidation

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

RE: MILLERSVILLE LANDFILL

Enclosed are the results of analyses for samples received by the laboratory on 10/14/21 15:27.

Please visit our website at www.mdspectral.com for a complete listing of our accreditations.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Will Brewington
President

Notes and Definitions

J	Detected but below the reporting limit; therefore, result is an estimated concentration (CLP J-Flag).
RE	Sample reanalyses are done at the laboratory's discretion as a mechanism to improve data quality. Any client requested reanalysis will be identified with a sample qualifier.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
%-Solids	Percent Solids is a supportive test and as such does not require accredidation

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the reporting limit; therefore, result is an estimated concentration (CLP J-Flag).
RE	Sample reanalyses are done at the laboratory's discretion as a mechanism to improve data quality. Any client requested reanalysis will be identified with a sample qualifier.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
%-Solids	Percent Solids is a supportive test and as such does not require accredidation

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

RE: Project: MLF-FALL-2021
Pace Project No.: 30443913

Dear Steve Brown:

Enclosed are the analytical results for sample(s) received by the laboratory on October 05, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - WestVirginia
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Alexis E. Ozoroski

PROJECT NARRATIVE

Project: MLF-FALL-2021
Pace Project No.: 30443913

Method: **EPA 8011**
Description: 8011 GCS EDB and DBCP
Client: Environmental Monitoring and Assessment LLC
Date: November 09, 2021

General Information:
10 samples were analyzed for EPA 8011 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 8011 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

Date: November 09, 2021

General Information:
10 samples were analyzed for SM 4500NO2-B-2011 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

H1: Analysis conducted outside the EPA method holding time.
- TW-6 (Lab ID: 30443913001)
- TW-6B (Lab ID: 30443913002)
- TW-7 (Lab ID: 30443913003)
- TW-7A (Lab ID: 30443913004)

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 466980

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30442324002

ML: Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.
- MS (Lab ID: 2255148)
  - Nitrite as N

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.
