QUALIFIERS

Project: MLF Fall 2022
Pace Project No.: 30531807

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 30531807001

QUALIFIERS

Project: MLF Fall 2022
Pace Project No.: 30531807

ANALYTE QUALIFIERS

2c	Alkalinity TV: -2.00 mg/L
3c	Alkalinity TV: 0.00 mg/L
4c	Alkalinity TV: 6.00 mg/L
5c	pH was adjusted to <2 at bench
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
ML	Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.
N3	Accreditation is not offered by the relevant laboratory accrediting body for this parameter.

This report shall not be reproduced, except in full,

RE: Project: MLF-Fall 2022
Pace Project No.: 30532667

Dear Steve Brown:

Enclosed are the analytical results for sample(s) received by the laboratory on October 25, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Beaver
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

David A. Pichette

PROJECT NARRATIVE

Project: MLF-Fall 2022
Pace Project No.: 30532667

Method: **EPA 6010D**
Description: BVR 6010D ICP, Water, 3010A
Client: Environmental Monitoring and Assessment LLC
Date: November 10, 2022

General Information:
5 samples were analyzed for EPA 6010D by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: MLF-Fall 2022
Pace Project No.: 30532667

Method: **EPA 6010D**
Description: BVR 6010D ICP, Dissolved 3010A
Client: Environmental Monitoring and Assessment LLC
Date: November 10, 2022

General Information:
5 samples were analyzed for EPA 6010D by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

QUALIFIERS

Project: MLF-Fall 2022
Pace Project No.: 30532667

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 30532667001

[1] Sample pH for 8011 is 5.

Sample: 30532667002

[1] Sample pH for 8011 is 6.

Sample: 30532667003

[1] Sample pH for 8011 is 5.

Sample: 30532667004

[1] Sample pH for 8011 is 6.

Sample: 30532667005

[1] Sample pH for 8011 is 6.

ANALYTE QUALIFIERS

1c	Alkalinity TV: -1.00 mg/L
2c	Alkalinity TV: 0.00 mg/L
3c	Alkalinity TV: 3.00 mg/L
4c	Alkalinity TV: 6.00 mg/L
5c	pH was adjusted to <2 at bench

QUALIFIERS

Project: MLF-Fall 2022
Pace Project No.: 30532667

ANALYTE QUALIFIERS

MH	Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.
ML	Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.
N3	Accreditation is not offered by the relevant laboratory accrediting body for this parameter.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

RE: Project: MLF-Fall 2022-Revised Report
Pace Project No.: 30533104

Dear Steve Brown:

Enclosed are the analytical results for sample(s) received by the laboratory on October 26, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Beaver
- Pace Analytical Services - Greensburg

(Greensburg PA) - Revision 1 - This report replaces the November 11, 2022 report. This project was revised on November 23, 2023 to add mercury to the results.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

David A. Pichette

PROJECT NARRATIVE

Project: MLF-Fall 2022-Revised Report
Pace Project No.: 30533104

Method: **EPA 6010D**
Description: BVR 6010D ICP, Water, 3010A
Client: Environmental Monitoring and Assessment LLC
Date: November 23, 2022

General Information:
8 samples were analyzed for EPA 6010D by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 8011 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 543420

CH: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

QUALIFIERS

Project: MLF-Fall 2022-Revised Report
Pace Project No.: 30533104

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 30533104001

QUALIFIERS

Project: MLF-Fall 2022-Revised Report
Pace Project No.: 30533104

ANALYTE QUALIFIERS

1c	Alkalinity TV: -1.00 mg/L
2c	Alkalinity TV: -2.00 mg/L
3c	Alkalinity TV: 0.00 mg/L
4c	Alkalinity TV: 2.00 mg/L
5c	Alkalinity TV: 4.00 mg/L
6c	pH was adjusted to <2 at bench
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
MH	Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.
ML	Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.
N3	Accreditation is not offered by the relevant laboratory accrediting body for this parameter.

RE: Project: MLF-Fall-2022
Pace Project No.: 30533468

Dear Steve Brown:

Enclosed are the analytical results for sample(s) received by the laboratory on October 27, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Beaver
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

David A. Pichette
david.pichette@pacelabs.com
(724)850-5617
Project Manager

PROJECT NARRATIVE

Project: MLF-Fall-2022
Pace Project No.: 30533468

Method: **EPA 6010D**
Description: BVR 6010D ICP, Water, 3010A
Client: Environmental Monitoring and Assessment LLC
Date: November 10, 2022

General Information:
4 samples were analyzed for EPA 6010D by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 543647

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30531671004

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2638718)
  - Iron

Date: November 10, 2022

General Information:
4 samples were analyzed for EPA 9038 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 544206

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30532438001,30533104004

MH: Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.

- MSD (Lab ID: 2641130)
  - Sulfate

ML: Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.

- MS (Lab ID: 2646969)
  - Sulfate

PROJECT NARRATIVE

Project: MLF-Fall-2022
Pace Project No.: 30533468

Method: **SM 4500NO2-B-2011**
Description: SM4500-NO2-B, Nitrite, unpres
Client: Environmental Monitoring and Assessment LLC
Date: November 10, 2022

General Information:
4 samples were analyzed for SM 4500NO2-B-2011 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

H1: Analysis conducted outside the EPA method holding time.
- DUP-2 (Lab ID: 30533468004)

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: MLF-Fall-2022
Pace Project No.: 30533468

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 30533468001

[1] Sample pH for 8011 is 6

Sample: 30533468002

[1] Sample pH for 8011 is 6

Sample: 30533468003

[1] Sample pH for 8011 is 5

Sample: 30533468004

[1] Sample pH for 8011 is 6

ANALYTE QUALIFIERS

1c	Alkalinity TV: 0.00 mg/L
2c	Alkalinity TV: 2.00 mg/L
3c	Alkalinity TV: 3.00 mg/L
4c	Alkalinity TV: 6.00 mg/L
5c	Sample volume was reduced so the sample could be within an acceptable range
H1	Analysis conducted outside the EPA method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

QUALIFIERS

Project: MLF-Fall-2022
Pace Project No.: 30533468

ANALYTE QUALIFIERS

MH	Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.
ML	Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.
N3	Accreditation is not offered by the relevant laboratory accrediting body for this parameter.
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

RE: Project: MLF-Fall 2022
Pace Project No.: 30534444

Dear Steve Brown:

Enclosed are the analytical results for sample(s) received by the laboratory on November 01, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Beaver
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

David A. Pichette

PROJECT NARRATIVE

Project: MLF-Fall 2022
Pace Project No.: 30534444

Method: **EPA 6010D**
Description: BVR 6010D ICP, Water, 3010A
Client: Environmental Monitoring and Assessment LLC
Date: November 17, 2022

General Information:
3 samples were analyzed for EPA 6010D by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: MLF-Fall 2022
Pace Project No.: 30534444

Method: **EPA 6020B**
Description: BVR 6020B MET ICPMS
Client: Environmental Monitoring and Assessment LLC
Date: November 17, 2022

General Information:
3 samples were analyzed for EPA 6020B by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3020A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 544775

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30531863001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2644670)
  - Thallium
- MSD (Lab ID: 2644671)

PROJECT NARRATIVE

Project: MLF-Fall 2022
Pace Project No.: 30534444

Method: **SM 2320B-2011**
Description: 2320B Alkalinity
Client: Environmental Monitoring and Assessment LLC
Date: November 17, 2022

General Information:
3 samples were analyzed for SM 2320B-2011 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 545203

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30534665001

ML: Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.

- MS (Lab ID: 2646600)
  - Alkalinity,Total (CaCO3 pH4.5)
- MSD (Lab ID: 2646601)
  - Alkalinity,Total (CaCO3 pH4.5)

Additional Comments:

Analyte Comments:

QC Batch: 545203

1c: Alkalinity TV: 0.00 mg/L

- BLANK (Lab ID: 2646598)
  - Alkalinity,Total (CaCO3 pH4.5)

PROJECT NARRATIVE

Project: MLF-Fall 2022
Pace Project No.: 30534444

Method: **SM 2540C-2011**
Description: 2540C Total Dissolved Solids
Client: Environmental Monitoring and Assessment LLC
Date: November 17, 2022

General Information:
3 samples were analyzed for SM 2540C-2011 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: MLF-Fall 2022
Pace Project No.: 30534444

Method: **EPA 350.1**
Description: 350.1 Ammonia, Distilled
Client: Environmental Monitoring and Assessment LLC
Date: November 17, 2022

General Information:
3 samples were analyzed for EPA 350.1 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 350.1 with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QUALIFIERS

Project: MLF-Fall 2022
Pace Project No.: 30534444

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1c	Alkalinity TV: 0.00 mg/L
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
ML	Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.
N3	Accreditation is not offered by the relevant laboratory accrediting body for this parameter.

RE: Project: MLF-Fall 2022
Pace Project No.: 30534938

Dear Steve Brown:

Enclosed are the analytical results for sample(s) received by the laboratory on November 02, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Beaver
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

David A. Pichette

PROJECT NARRATIVE

Project: MLF-Fall 2022
Pace Project No.: 30534938

Method: **EPA 6010D**
Description: BVR 6010D ICP, Water, 3010A
Client: Environmental Monitoring and Assessment LLC
Date: November 17, 2022

General Information:
7 samples were analyzed for EPA 6010D by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

QUALIFIERS

Project: MLF-Fall 2022
Pace Project No.: 30534938

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

QUALIFIERS

Project: MLF-Fall 2022
Pace Project No.: 30534938

ANALYTE QUALIFIERS

2c	Alkalinity TV: 2.00 mg/L
3c	pH was adjusted to <2 at bench
B	Analyte was detected in the associated method blank.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
MH	Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.
ML	Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.
N3	Accreditation is not offered by the relevant laboratory accrediting body for this parameter.
R1	RPD value was outside control limits.

RE: Project: MLF-Fall 2022
Pace Project No.: 30535386

Dear Steve Brown:

Enclosed are the analytical results for sample(s) received by the laboratory on November 03, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Beaver
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

David A. Pichette

Method: **EPA 6010D**
Description: BVR 6010D ICP, Water, 3010A
Client: Environmental Monitoring and Assessment LLC
Date: November 21, 2022

General Information:
6 samples were analyzed for EPA 6010D by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 545566

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30535424002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2648839)
  - Potassium
- MSD (Lab ID: 2648840)
  - Magnesium
  - Potassium
  - Sodium

QUALIFIERS

Project: MLF-Fall 2022
Pace Project No.: 30535386

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

SAMPLE QUALIFIERS

Sample: 30535386001

[1] Sample pH for 8011 is 7

Sample: 30535386002

[1] Sample pH for 8011 is 6

Sample: 30535386003

[1] Sample pH for 8011 is 6

Sample: 30535386004

[1] Sample pH for 8011 is 6

Sample: 30535386005

[1] Sample pH for 8011 is 6

ANALYTE QUALIFIERS

1c	Alkalinity TV: 0.00 mg/L
2c	Alkalinity TV: 1.00 mg/L
3c	Alkalinity TV: 2.00 mg/L
4c	pH was adjusted to <2 at bench
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

QUALIFIERS

Project: MLF-Fall 2022
Pace Project No.: 30535386

ANALYTE QUALIFIERS

MH	Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.
ML	Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.
N3	Accreditation is not offered by the relevant laboratory accrediting body for this parameter.
R1	RPD value was outside control limits.

This report shall not be reproduced, except in full,

RE: Project: MLF-FALL 2022
Pace Project No.: 30536604

Dear Steve Brown:

Enclosed are the analytical results for sample(s) received by the laboratory on November 08, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Beaver
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

David A. Pichette
david.pichette@pacelabs.com

PROJECT NARRATIVE

Project: MLF-FALL 2022
Pace Project No.: 30536604

Method: **EPA 7470A**
Description: BVR 7470 Mercury
Client: Environmental Monitoring and Assessment LLC
Date: November 17, 2022

General Information:
12 samples were analyzed for EPA 7470A by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 7470A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: MLF-FALL 2022
Pace Project No.: 30536604

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 547272
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1c	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
H1	Analysis conducted outside the EPA method holding time.
H2	Extraction or preparation conducted outside EPA method holding time.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
P2	Re-extraction or re-analysis could not be performed due to insufficient sample amount.

RE: Project: RESAMPLING-TW-29
Pace Project No.: 30542724

Dear Steve Brown:

Enclosed are the analytical results for sample(s) received by the laboratory on December 01, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Beaver

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

David A. Pichette
david.pichette@pacelabs.com

PROJECT NARRATIVE

Project: RESAMPLING-TW-29
Pace Project No.: 30542724

Method: **EPA 6020B**
Description: BVR 6020B MET ICPMS
Client: Environmental Monitoring and Assessment LLC
Date: December 08, 2022

General Information:
1 sample was analyzed for EPA 6020B by Pace Analytical Services Beaver. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3020A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: RESAMPLING-TW-29
Pace Project No.: 30542724

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

Notes and Definitions

J	Detected but below the reporting limit; therefore, result is an estimated concentration (CLP J-Flag).
RE	Sample reanalyses are done at the laboratory's discretion as a mechanism to improve data quality. Any client requested reanalysis will be identified with a sample qualifier.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
%-Solids	Percent Solids is a supportive test and as such does not require accredidation

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the reporting limit; therefore, result is an estimated concentration (CLP J-Flag).
RE	Sample reanalyses are done at the laboratory's discretion as a mechanism to improve data quality. Any client requested reanalysis will be identified with a sample qualifier.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
%-Solids	Percent Solids is a supportive test and as such does not require accredidation

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the reporting limit; therefore, result is an estimated concentration (CLP J-Flag).
RE	Sample reanalyses are done at the laboratory's discretion as a mechanism to improve data quality. Any client requested reanalysis will be identified with a sample qualifier.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
%-Solids	Percent Solids is a supportive test and as such does not require accredidation

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

L	Analyte is a possible laboratory contaminant
J	Detected but below the reporting limit; therefore, result is an estimated concentration (CLP J-Flag).
RE	Sample reanalyses are done at the laboratory's discretion as a mechanism to improve data quality. Any client requested reanalysis will be identified with a sample qualifier.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
%-Solids	Percent Solids is a supportive test and as such does not require accredidation

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

RE: Semi-Annual Groundwater and Surface Water Reports, January 1 – June 30, 2023, Millersville Landfill and Resource Recovery Facility and Sudley Closed Landfill

Dear Mr. Grenzer:

Enclosed are the Semi-Annual Groundwater and Surface Water Data Evaluation Reports for the Millersville Landfill and Resource Recovery Facility and the Sudley Landfill. The analytical results (raw data reports) for the monitoring events are also enclosed. The text, tables, and appendices are included as hard copies. The appendix containing the raw analytical data results is included electronically on the accompanying CDs.

Should you have any questions regarding the information covered in this document, please contact me or Mark Morris on (410) 222-6108.

Sincerely,

Stephen J. Krajcsik

EXECUTIVE SUMMARY

The Maryland Department of Environment (MDE) has developed groundwater and surface water monitoring requirements to detect pollutant releases from landfills that could have adverse impacts on public health and the environment. To fulfill these requirements, landfills must be monitored to address three issues: (i) whether a release of chemicals from the landfill has occurred; (ii) whether conditions potentially adverse to public health and the environment were created as a result of a release; and (iii) whether the results of a statistical evaluation of groundwater data require that additional sampling and/or corrective measures be implemented. This executive summary presents the findings of the 1st semi-annual 2023 (Spring 2023) groundwater sampling event, performed at the Millersville Landfill and Resource Recovery Facility (MLFRRF) located in Anne Arundel County. The findings are summarized with respect to these three issues.

The sampling results are evaluated for compliance with regulatory standards, including: (i) U.S. Environmental Protection Agency (USEPA) maximum contaminant levels (MCLs) and secondary maximum contaminant levels (SMCLs); (ii) Maryland health-based standards; and (iii) groundwater protection standards (GWPS) established for the site. MCLs and groundwater protection standards are established based on health concerns, whereas SMCLs are based on aesthetic concerns, such as taste, color, and odor.

The groundwater and surface water monitoring strategy for the MLFRRF was first identified in the Environmental Monitoring Plan (EMP), prepared for the Anne Arundel County Department of Public Works (the County) by Stearns & Wheeler [June 1995, Revised June 1996]. An updated EMP for MLFRRF prepared by ERM, dated November 5, 2002, was conditionally approved by MDE with their June 7, 2004 letter, contingent upon the County adding methyl tertiary butyl ether (MTBE) analysis to the monitoring program. The EMP was updated by ERM and approved by MDE in a letter dated March 25, 2010. The EMP defines two separate portions of the MLFRRF. Closed portions (Cells 1 East, 2, and 4) that stopped receiving waste prior to October 9, 1991, are subject to the requirements of the Code of Maryland (COMAR). The closed portions (Cells 5, 6, and 7) that stopped receiving waste prior to October 9, 1993, are subject to the provisions of 40 CFR Part 258 related to final cover requirements only. The recently-closed Cell 8 and currently active Cell 9 are subject to 40 CFR Part 258. However, for the purposes of monitoring, the closed portion (Cells 5, 6, and 7) are included in the monitoring and analysis requirements pursuant to 40 CFR Part 258 along with Cell 8 and Cell 9. Each of these portions of the MLFRRF are monitored by a comprehensive monitoring network, on-site regulated monitoring wells (Subtitle D), on-site regulated monitoring wells (COMAR), on-site non-regulated monitoring wells, off-site non-regulated monitoring wells, and other off-site monitoring locations. The monitoring networks were defined according to strategies that comply with the applicable regulatory requirements.

At the request of MDE, additional monitoring was performed for a select list of parameters from the Appendix II list in 40 CFR Part 258 for the on-site Subtitle D regulated monitoring wells.

OVERVIEW OF FINDINGS

Overall, the sampling event did not reveal substantial changes in groundwater quality and the results for inorganic parameters are consistent with historical results. Given the data for the MLFRRF, the site-specific hydrogeology, and the corrective actions implemented by the County, the potential for adverse effects to human health and the environment continues to be minimal.

Of all samples collected for the Spring 2023 sampling event, there were two MCL exceedances, shown on **Table 3.** Neither of the two MCL exceedances was a first time exceedance. The two MCL exceedances are discussed below in **Section 3.3.1**.

The groundwater elevations and flow directions observed in the Zone 3 aquifer during this sampling event are generally consistent with historical data and seasonal variations.

The following summarizes the results of the Spring 2023 groundwater sampling event.

On-Site Regulated Monitoring Wells (Subtitle D)

All of the Appendix I VOC detections above the reporting limit (RL) are listed in **Table 4.** The Appendix II VOC detections are listed in **Table 5**. The concentration of methylene chloride in TW-25A exceeded its applicable MCL, as is typical.

In general, concentrations of Appendix I and Appendix II VOCs in the on-site Subtitle D regulated wells are consistent with historical concentrations. All VOC results for Subtitle D wells are discussed below in **Section 3.3.2**.

While iron and manganese continue to exceed SMCLs and pH is below the SMCL range in several wells, concentrations are generally consistent with historical levels.

On-site Regulated Monitoring Wells (COMAR)

Detections of Appendix I VOCs above the RL in COMAR wells are typically listed in **Table 6**; however, there were no Appendix I VOCs detected above RL in these wells during the Spring 2023 event**.** The Appendix II VOC detections above the RL are listed in **Table 7.** There were no GWPS or MCL exceedances for VOCs. The concentrations measured for Appendix I and Appendix II VOCs in the on-site COMAR-regulated wells are generally consistent with historical records.

While iron and manganese continue to exceed SMCLs and pH is below the SMCL range in several wells, concentrations are generally consistent with historical levels.

On-site Non-regulated Monitoring Wells

Appendix I VOC detections above the RL are listed in **Table 8.** Appendix II VOC detections above the RL are listed in **Table 9**. There were no GWPS or MCL exceedances for VOCs. The concentrations measured for Appendix I and Appendix II VOCs in the on-site non-regulated wells are generally consistent with historical records.

While iron and manganese continue to exceed SMCLs and pH is below the SMCL range in several wells, concentrations are generally consistent with historical levels. The concentration of arsenic in TW-11A exceeded its applicable MCL, as is typical.

Off-site Non-regulated Monitoring Wells

Appendix I VOC detections above the RL are listed in **Table 10.** Appendix II VOC detections above the RL are listed in **Table 11.** There were no MCL or GWPS exceedances. Appendix I and Appendix II VOC concentrations in these wells are generally consistent with historical concentrations. Mercury concentrations in the off-site non-regulated monitoring wells are generally consistent with the historical record.

Off-site Residential Zone 4 Water Supply Wells

As shown on **Table 12** and **Table 13**, there were no Zone 4 residential water supply wells sampled during the Spring 2023 event.

Surface Water Sampling Locations

Appendix I VOC detections above the RL are typically listed in **Table 14,** but there were no detections above the RL at surface water locations during this sampling event**.** Appendix II VOC detections above the RL are typically listed in **Table 15**, but there were no detections above the RL at surface water locations during this sampling event.

Concentrations of inorganic parameters were generally consistent with the historical record for surface water sampling locations.

Statistical Evaluation

The results of the statistical evaluation of the Spring 2023 groundwater data are generally consistent with historical results. The findings indicate that downgradient samples show constituent concentrations that are statistically significant increases (SSIs) above background levels for several VOCs and inorganic parameters. There were three new SSIs for parameters detected above the RL during the Spring 2023 sampling event that were not identified during the Fall 2022 event: o-xylene in TW-25A, alkalinity in TW-14A, and pH in TW-06. Concentrations of most parameters that

exhibited SSIs have generally been consistent with their historical data set; that is, no trend is apparent in the concentrations.

1 INTRODUCTION

1.1 BACKGROUND

In accordance with the requirements of the Solid Waste Management Regulations provided in Title 40 of the Code of Federal Regulations, Part 258 (40 CFR Part 258) and the Maryland Department of the Environment (MDE), the Anne Arundel County Department of Public Works (County) monitors groundwater and surface water at the Millersville Landfill and Resource Recovery Facility (MLFRRF), located in Anne Arundel County, Maryland. The monitoring requirements are provided in the Environmental Monitoring Plan (EMP), prepared by Stearns & Wheeler [June 1995, Revised June 1996]. An updated EMP for MLFRRF prepared by ERM, dated November 5, 2002, was conditionally approved by MDE with their June 7, 2004 letter, contingent upon the County adding methyl tertiary butyl ether (MTBE) analysis to the monitoring program. The EMP was revised by ERM and approved by MDE in a letter dated March 25, 2010. The primary objectives of the compliance monitoring program for the MLFRRF are: (i) to determine if leachate from the landfill affects groundwater quality; (ii) to evaluate whether or not conditions that are potentially adverse to public health and the environment have been caused in groundwater or surface water by the operation of the landfill; and (iii) to determine whether the results of a statistical evaluation of the sampling data indicate that the County needs to perform additional groundwater sampling or implement corrective measures.

This semi-annual report summarizes the findings of the evaluation performed on the data obtained during the Spring 2023 groundwater sampling event. The sampling performed during this event was conducted to fulfill the monitoring requirements of 40 CFR Part 258 and the approved EMP. This report also provides an overview of groundwater quality based on current and historical data.

The sampling data were evaluated through: (i) data validation; (ii) an evaluation of the ion balances of the samples that were collected, and an evaluation of the relative percent differences (RPDs) between sampling locations and corresponding duplicates (**Appendix D**); (iii) a statistical comparison of laboratory data between designated upgradient and downgradient groundwater on-site Subtitle D regulated monitoring wells; (iv) a comparison of laboratory results for each groundwater monitoring well with historical groundwater quality information; and (v) a comparison of laboratory results for each groundwater monitoring well with United States Environmental Protection Agency (USEPA) and MDE regulatory criteria, as well as with site-specific groundwater protection standards (GWPS).

There are three sets of rules that govern how the MLFRRF monitoring data are evaluated: 40 CFR Part 258 regulations apply to those portions of the MLFRRF that continued to receive waste after October 9th, 1993; 40 CFR Part 258 regulations related to final cover requirements apply to those portions of the MLFRRF that stopped receiving waste prior to October 9, 1993; and State Code of Maryland (COMAR) regulations apply to those closed portions of the MLFRRF that stopped

receiving waste before October 9, 1991. Closed disposal Cells 1 East, 2, and 4 are monitored in compliance with COMAR standards. The closed Cells 5, 6, and 7 that stopped receiving waste prior to October 9, 1993, are subject to the provisions of 40 CFR Part 258 related to final cover requirements only. Recently-closed Cell 8 and currently active Cell 9 are subject to 40 CFR Part 258. However, for the purposes of monitoring, the closed Cells 5, 6, and 7 are included in the monitoring and analysis requirements pursuant to 40 CFR Part 258 along with Cell 8 and Cell 9.

Table 1 provides a summary of the groundwater monitoring network for the MLFRRF. As shown in **Table 1**, the wells are designated according to whether they are used to monitor the older (Cells 1 East, 2, and 4) or newer (combined Cells 5, 6, and 7, Cell 8, and Cell 9) portions of the MLFRRF. The groundwater and surface water monitoring network for the MLFRRF is illustrated in **Figure C-1** in **Appendix C**. In general, the older and newer portions are separated by the Baltimore Gas Electric right-of-way.

In accordance with the EMP and in conformance with applicable regulations, 22 of the 50 on-site monitoring wells at the MLFRRF are classified as on-site regulated monitoring wells (Subtitle D). Eleven are located along the Eastern Boundary, two are near Cell 8, two are near the facility entrance serving as background wells, and seven are near Cell 9. Additionally, another 15 of the 50 on-site monitoring wells are classified as on-site regulated monitoring wells (COMAR). These monitoring wells are governed by COMAR for the closed portion of the MLFRRF. One monitoring well, TW-26R, is regulated by the facility's refuse disposal permit and is not covered by this semi-annual report. The remaining 13 on-site monitoring wells are classified as non-regulated. In conjunction with the regulated wells, numerous off-site monitoring locations have been established by the County to take proactive measures that comply with 40 CFR Part 258 groundwater monitoring requirements.

The regulated monitoring wells (Subtitle D) consist of the wells at the site that provide information on the quality of groundwater passing the relevant point of compliance and that are downgradient of combined Cells 5, 6, and 7, Cell 8 and Cell 9. **Table 1** summarizes the sampling locations used to monitor these cells. The on-site monitoring wells are designated as "TW". Wells designated as "MW" are off-site monitoring wells installed by the County to monitor off-site chemical concentrations in the groundwater. Wells designated as "RW" are also off-site monitoring wells and were converted from drinking water supply wells to monitoring wells by the County. Off-site residential water supply wells drilled into either the Zone 3 or Zone 4 aquifer are designated by the County parcel number with the prefix "P". Off-site residential water supply wells which have been drilled into the Zone 4 aquifer by the County have the suffix "Z4". Zone 4 residential wells are sampled biennially, with the exception of well P-417-Z4. This well is sampled annually in the spring as a conservative measure because there is no sentry monitoring point between the landfill and Parcel 417. **Table 2** lists the residential water supply wells. The residential water supply wells were not sampled during the Spring 2023 sampling event.

Regulated monitoring well (Subtitle D) TW-20 was abandoned on April 8, 2010, by a licensed well driller in accordance with COMAR 26.04.04.11. The well was placed to monitor groundwater downgradient of Cell 8 but was placed where a stormwater management pond was designated for Cell 9. Zone 3 monitoring well TW-20R was installed February 3-5, 2010, adjacent to Cell 8 as a replacement for abandoned monitoring well TW-20 per the approved EMP.

In addition to TW-20R, two non-regulated on-site Zone 4 monitoring wells were installed prior to the Spring 2010 sampling event. The installation of non-regulated on-site Zone 4 monitoring wells TW-14B and TW-6B were completed per the approved EMP on January 21, 2010 and February 2, 2010, respectively.

In accordance with the EMP, four on-site Zone 3 monitoring wells, TW-27, TW-28, TW-29, and TW-30, were installed prior to the Spring 2013 sampling event for incorporation into the regulatory monitoring well network for Cell 9. Additionally, existing monitoring wells TW-01, TW-02A, and TW-03, located south of Cell 9, are now considered part of the regulatory monitoring well network. Two years of background monitoring were completed prior to Cell 9 becoming operational in January 2017.

During the Fall 2020, construction activity for Cell 9 of the landfill involved significant earthwork in the immediate vicinity of TW-28, including raising the ground surface by 10-12 feet. As a result, new sections of well pipe were added to the top of TW-28 in order to vertically extend the well.

1.2 GROUNDWATER SAMPLING AND LABORATORY ANALYSIS

1.2.1 Groundwater Sampling

The County contracted with Environmental Monitoring and Assessment, LLC (EMA) of Lititz, Pennsylvania, to conduct the semi-annual groundwater sampling at the MLFRRF for the Spring 2023 sampling event. The sampling event included the collection of samples from 22 regulated on-site monitoring wells (Subtitle D), 15 regulated on-site monitoring wells (COMAR), 13 on-site non-regulated monitoring wells, and 12 off-site monitoring wells. The sampling locations are listed in **Table 1.**

Prior to collecting the groundwater samples, the depth to the water table was measured at each well. Once the water table measurement was recorded, the monitoring wells were purged and sampled in accordance with 40 CFR Part 258, MDE requirements, and the EMP. As the monitoring wells were purged, measurements of groundwater dissolved oxygen, pH, conductivity, temperature, oxidation-reduction potential, turbidity, and appearance were recorded.

1.2.2 Groundwater Sample Analysis

The groundwater analytical program for the MLFRRF includes the analysis of samples for parameters used to monitor both the existing and closed portion of the MLFRRF. For the purpose of uniformity and ease of implementation, the samples that are collected from the wells used to monitor the closed portion of the MLFRRF are analyzed in accordance with the detection monitoring requirements (defined by 40 CFR Part 258) for the existing portion of the MLFRRF, as specified in the EMP. In accordance with these detection monitoring requirements, the samples are analyzed for the parameters listed in Appendix I of 40 CFR Part 258 (Appendix I parameters). The Appendix I parameters include inorganic constituents (metals) and organic constituents (volatile organic compounds or VOCs).

In addition to these analytical requirements, the samples collected at the site are also analyzed for parameters historically monitored at the site. These parameters include dichlorodifluoromethane and dichlorofluoromethane, which are listed in Appendix II of 40 CFR Part 258 (Appendix II parameters), methyl tertiary butyl ether (MTBE), and general chemistry parameters such as chloride and total dissolved solids that can sometimes be indicators of landfill leachate (indicator parameters).

In accordance with this analytical program described above, the groundwater samples were analyzed for VOCs, total and dissolved metals, and general chemistry indicator parameters. The methods used to analyze the samples included USEPA Methods 8260 and 8011 for VOCs; USEPA Methods 6010D, 6020B, and 7470A for metals; and 40 CFR Part 136 methods for the indicator parameters. The full laboratory analytical results and data packages are presented as **Appendix E.**

1.3 SURFACE WATER SAMPLING AND LABORATORY ANALYSIS

1.3.1 Surface Water Sampling

During the Spring 2023 sampling event, three surface water samples, SW-1, SW-2, and SW-3 were collected by EMA from Wells Branch, which flows west to east across the site (see **Figure C-1**). The surface water samples were collected from the stream locations that are representative of upgradient and downgradient conditions. Sample location SW-1 is an upgradient location between Cell 8 and the leachate pretreatment plant, approximately 200 feet downgradient of monitoring well TW-10A. Sample location SW-2 is a downgradient location near the TW-4 well cluster. Surface water collected at this location is representative of surface water conditions prior to discharging off-site. Sample location SW-3 is a mid-stream location that is downgradient of Stormwater Pond 8-1 and is located between combined Cells 5-7, Cell 8, and Cell 9. This location is approximately equal distance from sample locations SW-1 and SW-2.

1.3.2 Surface Water Sample Analysis

The surface water samples were analyzed for VOCs, total metals, and indicator parameters. The methods used to analyze the samples included USEPA Method 8260 for VOCs; USEPA Methods 6010D, 6020B, and 7470A for metals; and 40 CFR Part 136 methods for the indicator parameters.

1.4 QUALITY ASSURANCE/QUALITY CONTROL SAMPLING AND ANALYSIS

1.4.1 Quality Assurance/Quality Control Sampling (QA/QC)

Field and laboratory QA/QC protocols were employed during the sampling event to ensure that QA/QC criteria were met. The field QA/QC protocols included the collection and analysis of two blind duplicate samples from wells TW-24 and TW-25A. In addition, one field blank and three trip blanks were prepared and analyzed. The laboratory QA/QC protocols included the analysis of method blanks and matrix spike (MS) and matrix spike duplicate (MSD) samples for GC/MS runs. These protocols help identify possible sources of VOC contamination that may cause elevated or false positive parameter levels to be reported.

1.4.2 Quality Assurance/Quality Control Sample Analysis

To ensure that the field QC criteria were met, blind duplicate samples were analyzed for all parameters for which the groundwater samples were analyzed. These parameters include VOCs by USEPA Method 8260 and 8011; total and dissolved metals by USEPA Methods 6010D, 6020B, and 7470A; and the indicator parameters by 40 CFR Part 136 methods. The field blank was also analyzed for all parameters for which the Subtitle D regulated monitoring wells were analyzed. These parameters include VOCs by USEPA Method 8260; total and dissolved metals by USEPA Methods 6010D, 6020B, and 7470A; and indicator parameters by 40 CFR Part 136 methods. The trip blanks were analyzed for VOCs according to USEPA Method 8260 and 8011.

To ensure that the laboratory QA criteria were met, project-specific MS and MSD samples were analyzed at the rate of one MS/MSD sample for every 20 field samples, as specified in the EMP. The MS and MSD samples were used by the laboratory to evaluate possible matrix effects that could have interfered with the analytical method, and to estimate the method precision. The analysis of laboratory method blanks was performed to identify possible sources of contamination that may have caused elevated or false positive parameter levels to be reported.

1.5 DATA ANALYSIS METHODOLOGY

The analysis of the data obtained during this sampling event included: validation of the laboratory data, determination of USEPA National Primary Drinking Water Standards (MCLs) exceedances,

statistical evaluation of upgradient versus downgradient parameter concentrations, identification of GWPS exceedances, and assessment of groundwater elevations.

The laboratory sample data and QA/QC data were validated to verify proper analytical procedures and checks were performed by the analytical laboratory. The laboratory data validation is discussed further in **Appendix D** of this report. The laboratory analytical data packages are presented as **Appendix E** of this report.

The data were evaluated to determine whether or not concentrations exceeded MCLs and National Secondary Drinking Water Standards (SMCLs), state health-based standards, and site-specific GWPS. The GWPS for the site were established in 1997. This evaluation is included in **Section 3** of this report.

The data analysis included a statistical evaluation of the detection monitoring data obtained from the on-site regulated monitoring wells (Subtitle D). This evaluation was used to determine if there is a statistically significant change in groundwater quality for the portions of the site subject to 40 CFR Part 258.54 that may be attributed to the MLFRRF. The historical concentrations of the parameters detected in the groundwater samples from each on-site regulated monitoring well (Subtitle D) were compared to the historical background data using statistical methods described in the EMP and 40 CFR Part 258.53(g). The statistical analysis is discussed further in **Section 4** of this report.

2 SUMMARY OF SAMPLING EVENT

2.1 OVERVIEW

The County contracted with EMA to conduct the Spring 2023 sampling event at the MLFRRF. VOC sample analysis was performed by Maryland Spectral Services of Baltimore, Maryland, and inorganic sample analysis was performed by Pace Analytical Service (Pace), of Greensburg, Pennsylvania and Beaver, West Virginia. Four samples were analyzed for nitrate and total dissolved solids at Fairway Laboratories, Inc. of Altoona, Pennsylvania due to a laboratory error.

The groundwater monitoring wells were purged and sampled in accordance with the EMP and 40 CFR Part 258. **Figure C-1** shows the locations of the sampling points and the corresponding sampling classifications. Quality control blanks and blind duplicates were obtained, as discussed in **Section 1.4.1** of this report. The groundwater samples were submitted to the laboratory for analyses of total and specific dissolved metals, Appendix I VOCs, and inorganic indicators of leachate (chloride, ammonia, nitrite and nitrate-nitrogen, chemical oxygen demand, total alkalinity, sulfate, dissolved solids, and hardness).

2.2 DATA ANALYSIS

The methods used to collect and analyze the groundwater, surface water and QA/QC samples for this sampling event were evaluated to determine compliance with the EMP for the site and 40 CFR Part 258. The following procedures were followed to evaluate the compliance of the field sampling activities and the laboratory methods:

- Review of the appropriateness of the analytical methods;
- Review of the appropriateness of sample bottle types, preservatives, and holding times for each analytical method;
- Review of reports and analytical data for trip blanks, field blanks, duplicate samples, and laboratory method blanks to identify possible evidence of contamination;
- Review of Chain-of-Custody documentation for accuracy and completeness; and
- Review of field methods described in the field sampling reports.

The field and laboratory results were also evaluated to determine the validity of the data. The following procedures were followed to assess the validity of the data:

- Calculation of charge balance errors on the samples collected in the field;

- Review of MS and MSD samples to evaluate possible matrix effects that may interfere with the analytical method;

- Review of MS, MSD, and blind duplicate samples to calculate the relative percent difference (RPD) of duplicate samples in obtaining an estimate of laboratory method precision;

- Review of laboratory reports on instrument tuning, instrument calibration, and recoveries of spiked samples for each analytical method; and

- Comparison of the analytical data and groundwater elevations to historical values at each sampling location.

The results obtained from this evaluation satisfy the project QA/QC objectives. The results of the evaluation of the analytical data are provided in **Appendix D.** The full laboratory analytical data packages are presented as **Appendix E** of this report.

A comparison of the analytical data to MCLs, SMCLs, State standards, and established GWPS, as well as to historical data, is discussed in **Section 3.**

3 SUMMARY OF ANALYTICAL RESULTS

3.1 INTRODUCTION

Groundwater elevations were measured by the County on a monthly basis and are included in this report in **Appendix C**. The field and laboratory analytical results were evaluated by comparing the current data to historical data. The laboratory results were also evaluated for compliance with regulatory standards. In assessing the laboratory data, each parameter was evaluated for compliance with: (i) MCLs and SMCLs; (ii) Maryland health-based standards; and (iii) GWPS established for the site. MCLs and GWPS are established based on health concerns, whereas SMCLs are based on aesthetic concerns, such as taste, color, and odor. A statistical evaluation of the laboratory results is presented in **Section 4**.

3.2 GROUNDWATER ELEVATION DATA

The monthly water table measurements recorded during June 2023 are provided in **Appendix C.** The groundwater elevations are generally consistent with historical data.

Potentiometric surface contours for groundwater levels measured in wells screened within the Zone 3 aquifer during Spring 2023 are illustrated on **Figure C-1** in **Appendix C**. As shown on the drawing, the general direction of groundwater flow in the Zone 3 aquifer at the MLFRRF is toward the northeast. Groundwater flow direction is consistent with historical data.

3.3 ANALYTICAL RESULTS

The results of the comparison of the analytical data to regulatory standards and to historical trends are discussed below for the volatile organic and inorganic data. In assessing the data, each parameter was evaluated for compliance with the MCLs and SMCLs, with Maryland health-based standards, and with GWPS established for the site.

The current analytical data and the historical analytical data are included in tables in **Appendix A.** The tables present the concentrations over time for organic and inorganic parameters. They provide a simple means of evaluating trends in the concentrations. The “J” qualifier associated with a concentration indicates the compound was detected at a trace concentration below the laboratory RL but above the MDL and as such is an estimated value. The “U” qualifier associated with a concentration indicates the compound was not detected. The “B” qualifier indicates possible laboratory contamination due to the compound being detected in the method or field blank sample analysis. An “L” qualifier indicates possible laboratory contaminant. An “M1” qualifier indicates that the matrix spike recovery analysis performed by the lab exceeded quality control limits, but the result was accepted based on laboratory control sample (LCS) recovery.

3.3.1 **MCL Exceedances**

Table 3 lists the MCL exceedances at the site for this sampling event. As shown in **Table 3**, there were two parameters that exceeded their applicable MCLs. Time-series plots for parameter concentrations with historic MCL exceedances for on-site monitoring wells have been constructed to identify potential trends in concentrations over time. These plots are included in **Appendix B**. Both of the MCL exceedances were consistent with the historical record. There were no first-time MCL exceedances during the Spring 2023 sampling event.

3.3.2 **On-site Regulated Monitoring Wells (Subtitle D)**

Appendix I Volatile Organic Compounds

As shown on **Table 4**, 11 different VOCs were detected above the RL across 11 different monitoring locations. The concentration of methylene chloride in TW-25A exceeded its applicable MCL, as it has done over the past several years.

All detections of VOCs above the RL were generally consistent with the historical record. No Appendix I VOCs were detected above the RL in the following Subtitle D wells during the Spring 2023 sampling event: TW-02A, TW-03, TW-04B, TW-05A, TW-10A, TW-19, TW-20R, TW-23, TW-24A, TW-27, and TW-30.

Appendix II Volatile Organic Compounds and MTBE

As shown in **Table 5**, detections above the RL of dichlorodifluoromethane, dichlorofluoromethane, and MTBE were noted for 11 different locations. There were no GWPS or Maryland State Action Level exceedances. In general, concentrations of these parameters are consistent with concentrations measured over the past 10 years.

No Appendix II VOCs were detected above the reporting limit in the following Subtitle D wells during the Spring 2023 sampling event: TW-02A, TW-03, TW-04B, TW-05A, TW-10A, TW-19, TW-20R, TW-23, TW-24A, TW-27, and TW-30.

Inorganics

Mercury was detected at concentrations above the RL only in Subtitle D wells TW-04B and TW-24. The concentrations of mercury in TW-04B and TW-24 were below the applicable MCL.

Iron (total and dissolved), manganese (total and dissolved), and turbidity were detected in many of the regulated monitoring wells (Subtitle D) at concentrations that exceeded the applicable SMCLs. Iron and manganese are typical naturally occurring metals found in groundwater and are not necessarily indicative of contamination from the landfill. Measurements of pH were below the SMCL range for most on-site Subtitle D regulated monitoring wells. Low pH is also typical

of groundwater and is believed to be a natural property of groundwater at the MLFRRF. Furthermore, pH concentrations in the downgradient monitoring wells are consistent with those measured in upgradient background groundwater.

Concentrations of inorganic parameters measured during the Spring 2023 sampling event—including those of iron, manganese, and pH—were generally consistent with the historical record.

3.3.3 **On-site Regulated Monitoring Wells (COMAR)**

Appendix I Volatile Organic Compounds

As shown on **Table 6,** there were no Appendix I VOCs detected above the RL across all COMAR regulated wells during the Spring 2023 sampling event. As such, there were no MCL or GWPS exceedances.

Appendix II Volatile Organic Compounds and MTBE

As shown in **Table 7**, there was only one detection above the RL of an Appendix II VOC in a COMAR regulated on-site monitoring well, dichlorodifluoromethane in TW-15B. The concentration of the detection was below GWPS or Maryland State Action Levels. The concentration was consistent with the historical record. There were no Appendix II VOCs detected above the RL in COMAR regulated wells TW-07, TW-07A, TW-08, TW-08A, TW-09B, TW-09C, TW-15, TW-16, TW-17, TW-17A, TW-21, TW-22, TW-22A, and TW-22B.

Inorganics

Mercury was not detected at a concentration above the RL in any COMAR regulated wells during the Spring 2023 sampling event. Iron (total and dissolved), manganese (total and dissolved), and turbidity were detected in several of the COMAR regulated monitoring wells at concentrations that exceeded their applicable SMCLs. Iron and manganese are typical naturally occurring metals found in groundwater and are not necessarily indicative of contamination from the landfill. Measurements of pH were below the SMCL range for all on-site COMAR regulated monitoring wells. Low pH is also typical of groundwater and is believed to be a natural property of groundwater at the MLFRRF. Furthermore, pH concentrations measured in the downgradient wells are comparable to upgradient background concentrations.

Concentrations of inorganic parameters measured in COMAR regulated monitoring wells during the Spring 2023 sampling event—including those of iron, manganese, and pH—were consistent with the historical record.

3.3.4 **On-site Non-regulated Monitoring Wells**

Appendix I Volatile Organic Compounds

As shown on **Table 8**, there were four Appendix I VOCs detected above the RL across two on-site non-regulated monitoring wells during the Spring 2023 sampling event. These detections are consistent with the historical record. There were no GWPS or Maryland State Action Level exceedances. There were no Appendix I VOCs detected above the RL in the following on-site non-regulated wells: TW-02, TW-03A, TW-05B, TW-06A, TW-06B, TW-09, TW-11A, TW-14B, TW-16A, TW-18, and TW-21A.

Appendix II Volatile Organic Compounds and MTBE

As shown on **Table 9**, detections of dichlorodifluoromethane and dichlorofluoromethane above the RL were observed in two on-site non-regulated monitoring wells during the Spring 2023 sampling event. There were no GWPS or Maryland State Action Level exceedances. The concentrations were consistent with the historical record. There were no Appendix II VOCs detected above the RL in on-site non-regulated wells TW-02, TW-03A, TW-05B, TW-06A, TW-06B, TW-09, TW-11A, TW-14B, TW-16A, TW-18, and TW-21A.

Inorganics

Mercury was not detected above the RL in any on-site non-regulated monitoring wells. Iron (total and dissolved), manganese (total and dissolved), and turbidity were detected in a few of the on-site non-regulated monitoring wells at concentrations that exceeded their applicable SMCLs. Iron and manganese are typical naturally-occurring metals found in groundwater and are not necessarily indicative of contamination from the landfill. Measurements of pH were below the SMCL range for most on-site non-regulated monitoring wells. Low pH is also typical of groundwater and is believed to be a natural property of groundwater at the MLFRRF. Furthermore, pH concentrations measured in the downgradient wells are comparable to upgradient background concentrations.

Concentrations of inorganic parameters measured in on-site non-regulated monitoring wells during the Spring 2023 sampling event—including those of iron, manganese, and pH—are generally consistent with the historical record.

3.3.5 **Off-site Non-regulated Monitoring Wells**

Appendix I Volatile Organic Compounds

As shown on **Table 10**, five different Appendix I VOCs were detected above the RL across six different off-site non-regulated monitoring well locations. There were no MCL or GWPS exceedances. In general, VOC concentrations detected above the RL in these wells are consistent

with historical concentrations. There were no Appendix I VOCs detected above the RL in wells MW-P4, MW-P9, MW-P417, MW-P440, RW-P171-1, and RW-P441.

Appendix II Volatile Organic Compounds and MTBE

As shown in **Table 11**, detections of dichlorodifluoromethane and dichlorofluoromethane above the RL were observed at six off-site non-regulated monitoring wells. There were no GWPS or Maryland State Action Level exceedances. The detected concentrations of dichlorodifluoromethane and dichlorofluoromethane are generally consistent with the historical record. There were no Appendix II VOCs detected above the RL in wells MW-P4, MW-P417, MW-P440, MW-P9, RW-P440, and RW-P171-1.

Inorganics

All off-site monitoring wells were analyzed for mercury. There were two concentrations of mercury detected above the RL in off-site non-regulated monitoring wells during the Spring 2023 sampling event, in wells MW-P106 and RW-P584. The concentrations of mercury in both of these wells were below the applicable MCL. The detected concentrations are consistent with the historical record.

3.3.6 **Off-site Residential Zone 4 Water Supply Wells**

As shown on **Table 12** and **Table 13**, there were no off-site residential Zone 4 water supply wells sampled during the Spring 2023 sampling event.

3.3.7 **Surface Water Sampling Locations**

Appendix I and Appendix II Volatile Organic Compounds

As shown on **Table 14** and **Table 15**, there were no Appendix I or Appendix II VOCs detected above the RL at any surface water monitoring locations during the Spring 2023 sampling event.

Inorganics

There were no MCL exceedances of inorganic parameters at the surface water sampling locations. SMCL exceedances were observed for iron and turbidity at SW-2 and SW-3. Concentrations of all detected inorganic parameters at surface water locations were consistent with historical values.

4 STATISTICAL EVALUATION

4.1 INTRODUCTION

In accordance with the EMP and 40 CFR Part 258.53, groundwater sampling and analysis requirements, the groundwater parameters at the MLFRRF have been statistically analyzed. Listed below are the objective of the analysis, the procedures used, and the summary of results. The detailed results of the statistical analysis are included after the text.

4.2 OBJECTIVE

According to the Code of Federal Regulations (40 CFR Part 258), groundwater monitoring data must be statistically analyzed to determine if parameter levels are exceeding background groundwater quality levels at each downgradient well. This goal is met by statistically analyzing the groundwater data that have been collected on the site since 1993. The analyses will determine if the land use may be contributing to groundwater contamination.

4.3 PROCEDURE

Samples have been collected since 1993 and tested for the constituents specified in the EMP. The concentrations observed in the downgradient wells are compared to the concentrations observed in the upgradient wells. If the downgradient samples show significantly higher concentrations than the upgradient samples statistically, it indicates that land use practices are likely affecting the groundwater quality.

The groundwater data were analyzed using the Mann-Whitney Test (Wilcoxon Rank Sum Test) to determine whether the downgradient data differed from the upgradient data with statistical significance. The Mann-Whitney analysis is nonparametric, that is, it assumes no underlying distribution (like the normal distribution) and compares two groups of data and determines whether both groups come from the same population with a certain confidence.

Individual statistical tests have a certain amount of uncertainty associated with them. When multiple tests are combined (from different wells and different constituents), that uncertainty is compounded. An overall network-wide Type I error rate of 5% is required by 40 CFR Part 258.53(h)(2); however, an error rate no less than 1% shall be applied to any single test. A 5% Type I error rate means 5% of the recognized exceedances are in reality not actually elevated above background levels; that is, they represent false positives.

Statistical analyses are performed for all parameters detected over the RL during the Spring 2023 sampling event at downgradient wells. Using the Bonferroni adjustment to account for multiple

statistical comparisons, a Type I error rate of much less than 1% per analysis would result, so a Type I error rate of 1% was used as the minimum allowable under 40 CFR Part 258.52(h)(2).

For each sampling event, an average concentration from the upgradient wells was calculated. The collection of average concentrations for all sampling events was then compared to the concentrations for all sampling events at each of the downgradient wells. For each downgradient well, the upgradient and downgradient concentrations are combined and ranked (the lowest concentration is assigned a rank of 1). Tied concentrations are ranked equally by averaging the ranks that would be assigned to the tied group if they were not tied.

The sum of the ranks, the number of upgradient observations, and the number of downgradient observations are used to calculate the Mann-Whitney Test Statistic (U). The calculated U for each well/parameter pair is compared to a critical U value which is published in tables in statistical texts. Critical U values are based on the number of samples in the upgradient group and at each downgradient well. Therefore, the critical U values vary from parameter-to-parameter and from well-to-well. If the calculated U is greater than the critical U, there is no exceedance at 99% confidence (a 1% Type I error rate for each analysis). Likewise, if the calculated U is less than the critical U, there is an exceedance.

Because the upgradient (background) condition is compared to each downgradient well separately, each well/parameter combination is tested. The results of all of the tests are included following the report text. There may be exceedances in some downgradient wells for a particular parameter, but not in other downgradient wells.

4.4 SUMMARY OF RESULTS

The results of the statistical analysis are shown on **Table 16.** The findings indicated that downgradient samples show constituent concentrations that are statistically significant increases (SSIs) above background levels in all 20 of the downgradient on-site regulated wells.

There were three new SSI identified for which the parameter was detected above the RL during this sampling event that were not identified during the previous sampling event. These new SSIs consist of o-xylene in TW-25A, alkalinity in TW-14A, and pH in TW-06. The Spring 2023 sampling event is the first event since Fall 2017 that o-xylene has been detected at a concentration above the RL in TW-25A. Furthermore, the SSI was triggered because o-xylene has never been detected in either of the background wells over their entire historical records. Alkalinity has frequently been detected in TW-14A at concentrations greater than background well concentrations since 2017. The measurement of pH in TW-06 has been detected at levels greater than background well concentrations since 2018 and the concentration has been relatively stable during that time. Furthermore, the pH values in TW-06 are more neutral than those of the

background wells, so the SSI for pH in TW-06 does not indication degradation in groundwater quality.

All other SSIs identified during the Spring 2023 event are generally consistent with historical exceedances. Concentrations of most parameters that exhibited SSIs have generally been consistent with their historical data set; that is, no trend is apparent in the concentrations.

5 RECOMMENDATIONS

The results of the Spring 2023 groundwater sampling event indicate that overall, groundwater conditions are generally consistent with historical data for the MLFRRF. Many monitoring wells continue to show VOC concentrations lower than historical data. While the data and statistical evaluations indicate that a release of landfill constituents to groundwater may have occurred, the site-specific hydrogeology and the corrective measures already implemented by the County have limited the potential for any adverse effects on human health and the environment. It is recommended that regular groundwater monitoring be continued in accordance with the EMP.
